Flowchart:

start
User chooses to add a player table, add a new row for one player, view an individual player or view the entire team average
Create new table for player
ask user for player name
Create a new table in stats.db TABLE "PLAYER"
Add new row into player table
ask user for player name
ask the user for the values for each column
Add new row in TABLE "PLAYER"
View stats for a player
ask user for player name
Calculate the players average for every stat
add a new row at the bottom of TABLE "PLAYER" for the average stat for the whole table
display the rows for the player's stats for every game, nicely in a table
View averages for players on the team
Add the averages of every player to a new table for team averages in stats.db TABLE "TEAM"
display the rows for each of their season average, nicely in a table
Exit
End

Test plan:

Action	Method
Program displays a start message and menu upon start	-Run the program and see if a menu is displayed -Put an option not in the menu and see if it redirects back to the menu -Enter an option and see if it is directed to that option
Program displays data in a formatted table	-Select view player or view team to view the tables
Program adds player and asks for data and adds data to the table	-Select add player -Select edit player to check if the option to edit the player is available -Select add new game -Enter the data requested by the program -Select view player to view the data entered by the user
Program is able to remove rows from a player table or delete a player	-Select edit player -Select delete row -Select view player to check if the row is deleted -Select delete player -Select view team to check if player is deleted -If unexpected value is inputted check if it redirects to the menu
Program displays error message if unexpected values are entered	-When entering data, input unexpected or null values -Check if program displays a warning message and redirects the user
Program restarts automatically without the user having to manually restart	-After performing a function check if the user is redirected to the main menu
