Criterion E: Evaluation

After the development of the product, the program was tested by me. The client got a chance to test the product as well in the final interview. The client also gave feedback on the product. The program was tested by the client on a laptop via USB drive. The transcript of the interview is documented in the appendix.

The program meets the following success criteria:

Success criteria	Result
Program will display a menu	Fully met
Program will display data in a nice table	Fully met
Program will ask for the name of the player to be added	Fully met
Program will ask for a value to be inputted for a stat	Fully met
Program will be able to display the names of every team member	Fully met
Program will be able to calculate averages	Fully met
Program will restart without the user having to restart it manually	Fully met

Client feedback:

After the product was tested, the client gave me feedback on the program and ways it could be improved. The client liked how user friendly the program was and the variety of options relating to its content. The client thought that the program presented accurate and useful information. The client also mentioned that the program seemed very professional.

The client would have liked to see some small descriptions for the options and terms. Overall the client was quite satisfied with the program. Something that we noticed is that when we opened the view player function with no existing players, the program would force an error instead of redirecting to the menu.

For future additions, the client suggested an extra feature where there would be an option to update stats live as the game is being played. As this would be a future project addition, the client finds the program to be a great stat tracker for common use.
